## STATE AIR POLLUTION EMISSION NOTICES (APENS) SUBMITTALS

This letter is submittal data for the attention of C. C. Jierree.

Attached are revised Air Pollution Emission Notices (APENS) for the Building 771 incinerator and the beryllium emission points which are to be submitted to the Colorado Department of Health (CDH), Air Pollution Control Division, as per agreement of the July 10, 1989 meeting with CDH, DOE and Rockwell representatives.

Included with the revised APEN for the Building 771 incinerator is the information on material burned in the incinerator in 1987 and 1988 as requested by CDH in their June 12, 1989 letter. The revised APENS for beryllium cover 50 emission points. Six emission points have separate APENS and include Buildings 444, 447, and 865 where beryllium is actually processed. The building 778 laundry facility is also filed on a separate APEN since clothing from beryllium processing areas are laundered here. The remaining 44 beryllium emission points were filed together on a single APEN since beryllium parts may be present in these areas but beryllium is not processed. Also included with the beryllium emission point APENS is a discussion of the beryllium sampling method used on plantsite and the justification, based on method and results, for not sampling for beryllium over a 24 hour period as specified in the State Air Quality Regulation #8.

If you have any questions on these submittal forms, please call  
G.H. Setlock, Manager, Environment and Health Programs, Extension 2453.
